EHX™ TECHNOLOGY: Inside every Armstrong Air furnace, you'll find our proprietary heat exchanger with EHX Technology. Stainless steel plates are crimped together, rather than welded, to reduce fatigue from heat strain and improve durability. Compared to conventional heat exchangers, the patented design offers more surface area for greater heat transfer, and advanced airflow properties allow more even heat distribution with no hot spots. As tough as it is dependable, EHX Technology is designed and tested to outperform our high standards and your expectations.

QUIET COMBUSTION™: The burners inside every Armstrong Air furnace aren't like the burners you'll find in other furnaces. No detail was overlooked in their design, from their deeper, specially shaped fuel channels to the increased number of jets. As a result, Armstrong Air furnaces operate with extreme reliability, impressive efficiency and very low noise levels.

MHT™ TECHNOLOGY: Inside every Armstrong Air air conditioner and heat pump, you'll find a brilliant approach to cooling called MHT Technology. In Armstrong Air's proprietary heat transfer system, a specially designed fan shroud pulls air evenly throughout the air conditioner's coil surface. The coil features rifled tubing to enhance refrigerant flow, while lanced coil fins increase surface contact between metal and air. All combine for maximum heat transfer and efficiency.

QUIET SHIFT™ TECHNOLOGY: Allows heat pumps to enter defrost mode without excessive noise. Since refrigerant pressure is allowed to equalize before the switch, the heat pump can dissipate performance-robbing frost and ice quietly.
